Looking at James Ansell's printouts there would appear to have been 66 net completions on what might have been garden land in the period 2011-16 (the monitoring of different aspects of PDL only started in 2011 so it is not possible to go back any further.) Excluding these 66 from the 5 year total equates to 37 per year. NB this is the HCC definition of small sites being 9 or fewer dwellings. Also includes garden land
