

Patterns in nature

Owned and managed by

Explore nature on your doorstep to discover what patterns you can find.

A repeating pattern is called a fractal.

Draw what you find in the boxes:

Can you describe what the pattern is like? Are they fractals?

Can you find any of the patterns below?

Symmetry

Spiral

Branching

Meander

Stripes

Patterns and colour in nature inspire artists to create stunning art in the landscape.

Research Andy Goldsworthy and see if you can create some natural art in your local green space.
